Optimize eDiscovery to Maintain Compliance and Manage Risk

Increase efficiency to improve compliance and gain greater peace of mind.

As data continues to grow and expand, you're faced with increasing and more complex compliance and risk challenges. With so many compliance and eDiscovery products on the market, it can be difficult to find the solution that best suits your organization's needs.

Many teams often find themselves unprepared to meet compliance requirements. They're unable to find relevant information within large volumes of content and metadata. To ensure you're litigation-ready, eDiscovery has become necessary with collaboration across IT, human resources, and legal teams. eDiscovery is no longer only for litigation: privacy requests, Freedom of Information Act requests, and internal investigations leverage the same discovery and compliance processes.

Enhance eDiscovery with a Powerful Cloud Solution

You can't solve the scale and complexity of eDiscovery with a mix of point products. Arctera Insight eDiscovery is a powerful, integrated, cloud-based solution that enables you to easily collect, review, and produce electronically stored information for legal and investigative needs. It delivers high levels of performance and efficiency to give compliance professionals greater peace of mind.

Collect Everything and Anything

Collect information from more than 130 sources by leveraging powerful capture capabilities to simplify data collection and minimize compliance risk.

- Retain all conversations across collaboration content, chat, email, social media, audio, and video.
- Target specific relevant information to enhance future data insights.
- Improve eDiscovery and legal preparedness.

Migrate Seamlessly and Manage Data Collection

Ensure that your data archiving processes and high-risk data management meet governance requirements across all storage environments. Employ archiving capabilities that preserve content types by policy and protect against accidental deletion.

- Use machine learning trained to identify relevant information with full transparency.
- Direct reviewers to specific content using *Hit Highlight Navigation*, so they can focus on pertinent elements of a collected message.
- Preserve unstructured data and make it discoverable through classification and indexing.

Automate Classification to Minimize Risk and Maximize Value

Use a unified solution to define patterns and policies, no matter where the data exists within your organization's metadata. Providing automation and intelligence about your data allows you to make more informed decisions about storage optimization, regulatory compliance, and security.

- Detect sensitive data types and behaviors using more than 1,400 pre-trained patterns.

- Surface compliance violations with more than 250 best-in-class preconfigured, customizable policies.

- Reduce compliance risk with advanced data analytics.

Gain Visibility and Control of Unstructured Data

Classify sensitive data — on-premises and in the cloud — and gain relevant knowledge to identify security threats and prepare compliance audits more efficiently. Combine data visibility and analytics to improve data governance and immediately resolve security and compliance issues, insider threats, and cyberthreats.

- Leverage Electronic Discovery Reference Model (EDRM) collections from targeted content sources.

- Quickly locate relevant data for discovery, supervision, privacy, and legal challenges.

- Use advanced reporting to reduce storage costs and identify data you should keep, as well as what you can defensibly delete.

Taking a proactive approach to reviewing data and automating workflows enables you to efficiently navigate complex discovery requirements. Arctera eDiscovery supports discovery in one comprehensive solution with defensible collection of your relevant content sources, purpose-built review of all data types, deep analysis of unknown metadata, and efficient production of relevant documents.
