

Improve Performance and Efficiency of Legal Discovery

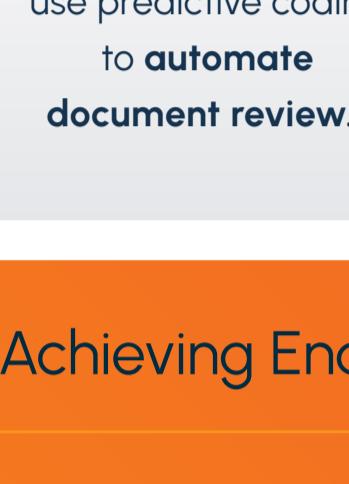

Use eDiscovery tools to manage digital records for legal claims and compliance requirements.

As data volumes continue to grow, how can you improve your ability to find the information you need for legal and investigative needs within large volumes of content and metadata?

56%

of all data collected is seen as valuable resulting in a lot of **stored unused data**.¹

93%

of organizations use predictive coding **to automate document review**.²

\$4B
in fines

the GDPR has levied nearly **1,700 enforcement actions** since enactment in 2018.³

Key Challenges to Achieving End-to-End eDiscovery

TIME-CONSUMING AND EXPENSIVE

eDiscovery requirements for the average legal case can cost more than \$1M. FOIA (Freedom of Information Act) officers tend to have huge backlog.

CYBERSECURITY RISK

Excessive data growth accelerates the need for modern technology to identify security threats and prepare compliance audits more efficiently.

EVER-CHANGING INDUSTRY REGULATIONS

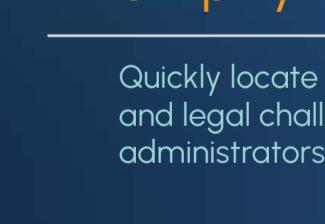

Constantly evolving regulations increase the need for better eDiscovery processes and personnel beyond only legal departments.

DATA COMPLEXITY

More efficient processes are required for searching, archiving, and protecting relevant sensitive data rather than humans manually finding and reviewing documents page by page.

How Arctera™ Insight eDiscovery Can Help

Collect Everything Anywhere

Use powerful capture capabilities to collect information from more than 130 content sources, including collaboration apps, chat, email, social media, audio, and video.

Resolve Security Issues

Use data visibility and analytics to improve data governance and resolve security, compliance, insider, and cyberthreats immediately. Identify what data you can defensibly delete to reduce storage costs.

Identify What Matters

Leverage eDiscovery workflows and machine learning to discover relevant information with full transparency for potential legal and investigation issues.

Simplify Efficient Review

Quickly locate relevant data for discovery, supervision, privacy, and legal challenges. Make it easy for designated reviewers and administrators to do self-service, online exports of search results.
