Comprehensive Content Capture & eDiscovery

Streamline compliance across all data sources.

Overview

Although email is still heavily used by many organizations, more and more business communications have eclipsed it to some extent with focus on new digital mediums, like social media, instant messaging and mobile communications.

Capturing these communications has become essential for:

- Compliance with industry and government regulations
- Support of eDiscovery efforts for legal cases and investigations
- Retention of communications for corporate governance and other mandates
- Internal policies from HR or legal to keep business communications on file

The Arctera Insight Platform's Capture capability complements the Arctera eDiscovery Platform by incorporating all data sources most relevant to your regulatory compliance, internal policies, and eDiscovery initiatives.

Capture

Comprehensive data source support—Capture content from over 130 widely used sources, including collaboration suites, social media, mobile and SMS, financial platforms, document management systems, databases, telecommunications systems, and more, across both on-premises and cloud environments.

Capture filtering—Configure content source capture based on date range to optimize initial capture operation.

Message threading—Pull the whole conversation, consisting of many interactions, into one archivable item.

Native capture—Captures from content source via native APIs.

Key Functional Areas

- Legal Hold
- Identification & Collection
- Processing & Analysis
- Review & Production

Key Benefits

Centralized discovery of all content—Streamline eDiscovery by capturing and unifying all data into a single repository—eDiscovery Platform.

Capture confidently—Common platform with deep understanding of many content sources allows you to confidently capture and manage unstructured information in a consistent manner.

Stay compliant—Improve compliance with industry and government regulations, such as the General Data Protection Regulation (GDPR), MiFID II, SEC 17-a4 and many others by capturing relevant electronic content beyond email.

eDiscovery

Arctera™ Insight Capture extends the eDiscovery Platform's full functionality to a wide range of content sources, enabling comprehensive compliance and discovery across all collected data.

Seamless integration—Perform collection from all supported content sources directly into eDiscovery Platform.
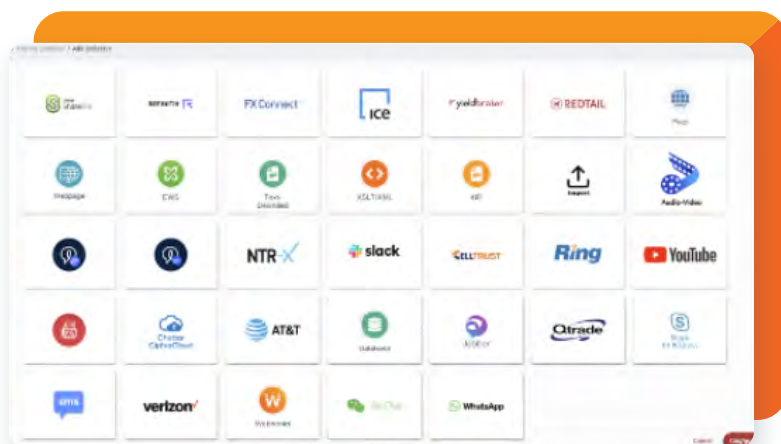

Metadata filters—Create targeted collections by filtering via metadata fields, eliminating the need for any scripting or programming.

Pre-processing analytics—Visually summarize overall document set characteristics and present detailed analysis by custodian, timeline and file type.
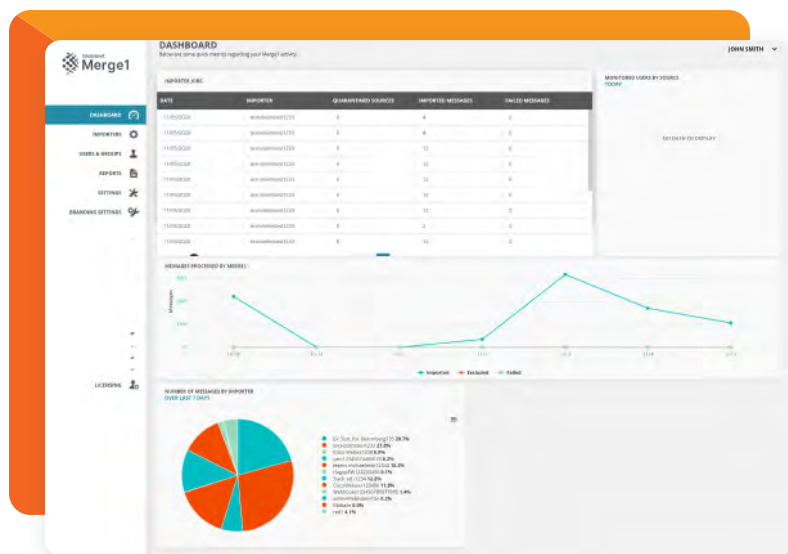

Integrated classification engine—Use classification to increase efficiency and expedite the review process.

Subject prefixes—Simplify review process by adding metadata to the subject line (for example, adding the content type, such as "Bloomberg:", to the subject line of a message).

Monitored user filtering—Collects content for all custodians or specified custodians only.

Arctera Insight Capture offers a wizard-driven workflow to help simplify configuring data sources to capture.

Easily manage and monitor all your data sources from the dashboard.

Manage

Flexible deployment—Deploy Capture on-premises or in the cloud.

Connector auto-update—Update only specific data source connectors as enhancements become available.

Consolidated management—Manage/add/remove all connections from a single pane of glass and immediately view, via our dashboard, which data sources you are capturing the most on a daily or trending basis.
